

## FIRE ENGINEERING

CE MARKING SPECIALISTS

### ● Fire Safety Guidelines

Amendments to the Fire Regulations, introduced in December 1999, imposed obligations on the majority of employers to assess and document the risks to staff and the public from fire on their premises.

Laidler Associates can assist companies to meet these requirements, with extensive experience in conducting fire risk assessments in industry. Assessments offered range from a cost effective 'health check', through to a 'comprehensive evaluation' of the risk of fire and subsequent damage to people, property or business operation, depending on the needs of the individual client.

### ● Fire Engineering Solutions

Laidler Associates can help prevent delays to building projects and the associated costs by developing justified fire-engineering solutions. These will demonstrate to the regulatory authorities a satisfactory level of fire safety.

Working in partnership with other professionals such as architects, we will ensure fire safety compliance with building regulations and codes of practice, avoiding unnecessary burdens on the cost or timescale of a project.

### ● SEMI S14

Through Laidler Certification, Laidler Associates can assist the manufacturers of semiconductor manufacturing equipment to comply with the S14 Standard, which deals with the risk to equipment and product associated with fire and combustion by products.

### ● Project Management

The successful implementation of any project is critically dependent on high quality project management. Laidler Associates have an excellent track record in this field preparing contract specifications, review tenders and managing works at clients' premises including the installation and commissioning of fire detection, fire suppression and passive fire protection systems. For added peace of mind, we offer a range of project services including audits and inspections to verify compliance with specification and progress for stage payment authorisation.

### ● Training Seminars

Laidler Associates offer a range of training packages and seminars, which can be conducted at the clients' premises or alternative locations. We have experience of arranging events of all sizes at local, national and international level and can develop bespoke training packages, tailored to our clients' specific needs.

### ● Disaster Recovery

Fire strategy plans, fire safety documentation and emergency plans are essential tools in an organisations' management of fire safety. Laidler Associates are frequently called upon to assist clients to develop such plans. We have experience in preparing fire plans covering areas such as roles and responsibilities of personnel, actions to be undertaken in the event of fire, facilities and pre-fire planning.

## LAIDLER SERVICES

Laidler Associates will work closely with your personnel to ensure compliance and can provide our training seminars at your premises, a venue of your choice or at our training facility. Alternatively, Laidler Associates can complete the whole task on your behalf and present you with a comprehensive report backed up by all documentation required, which would include:

- Quick and efficient risk assessment
- Hazard identification
- Risk Evaluation
- Recommendations for control measures - 'To do list'
- Full documentation
